About the authors

Jiri Pik is an artificial intelligence architect and strategist who works with major investment banks, hedge funds, and other players. He has architected and delivered breakthrough trading, portfolio, and risk management systems, as well as decision support systems, across numerous industries. His consulting firm, Jiri Pik—RocketEdge, provides its clients with certified expertise, judgment, and execution at lightspeed.

Sourav Ghosh has worked in several proprietary high-frequency algorithmic trading firms over the last decade. He has built and deployed extremely low-latency, high-throughput automated trading systems for trading exchanges around the world, across multiple asset classes. He specializes in statistical arbitrage market-making and pairs trading strategies for the most liquid global futures contracts. He works as a senior quantitative developer at a trading firm in Chicago. He holds a master's in computer science from the University of Southern California. His areas of interest include computer architecture, FinTech, probability theory and stochastic processes, statistical learning and inference methods, and natural language processing.

About the reviewer

Ratanlal Mahanta is currently working as a quantitative analyst at bittQsrv, a global quantitative research company offering quant models for its investors. He has several years of experience in the modeling and simulation of quantitative trading. He holds a master's degree in science in computational finance, and his research areas include quant trading, optimal execution, and high-frequency trading. He has over 9 years' experience in the finance industry and is gifted at solving difficult problems that lie at the intersection of markets, technology, research, and design.

Table of Contents

Preface

Section 1: Introduction to Algorithmic Trading

1

Introduction to Algorithmic Trading

Walking through the evolution of algorithmic trading	4	The exchange matching engine	9
Understanding financial asset classes	6	Understanding the components of an algorithmic trading system	9
Going through the modern electronic trading exchange	7	The core infrastructure of an algorithmic trading system	10
Order types	7	The quantitative infrastructure of an algorithmic trading system	11
Limit order books	8	Summary	16

Section 2: In-Depth Look at Python Libraries for the Analysis of Financial Datasets

2

Exploratory Data Analysis in Python

Technical requirements	19	Revelation of the identity of A, B, and C and EDA's conclusions	41
Introduction to EDA	20	Special Python libraries for EDA	42
Steps in EDA	20	Summary	44

3

High-Speed Scientific Computing Using NumPy

Technical requirements	46	Basic ndarray operations	59
Introduction to NumPy	46	Scalar multiplication with an ndarray	59
Creating NumPy ndarrays	46	Linear combinations of ndarrays	59
Creating 1D ndarrays	46	Exponentiation of ndarrays	59
Creating 2D ndarrays	47	Addition of an ndarray with a scalar	60
Creating any-dimension ndarrays	47	Transposing a matrix	60
Creating an ndarray with np.zeros(...)	48	Changing the layout of an ndarray	60
Creating an ndarray with np.ones(...)	48	Finding the minimum value in an ndarray	61
Creating an ndarray with np.identity(...)	49	Calculating the absolute value	61
Creating an ndarray with np.arange(...)	49	Calculating the mean of an ndarray	62
Creating an ndarray with np.random.randn(...)	49	Finding the index of the maximum value in an ndarray	62
Data types used with NumPy ndarrays	50	Calculating the cumulative sum of elements of an ndarray	63
Creating a numpy.float64 array	50	Finding NaNs in an ndarray	63
Creating a numpy.bool array	50	Finding the truth values of x1>x2 of two ndarrays	64
ndarrays' dtype attribute	51	any and all Boolean operations on ndarrays	65
Converting underlying data types of ndarray with numpy.ndarrays.astype(...)	51	Sorting ndarrays	66
Indexing of ndarrays	51	Searching within ndarrays	68
Direct access to an ndarray's element	52	File operations on ndarrays	69
ndarray slicing	53	File operations with text files	69
Boolean indexing	56	File operations with binary files	70
Indexing with arrays	58	Summary	71

4

Data Manipulation and Analysis with pandas

Introducing pandas Series, pandas DataFrames, and pandas Indexes	74	pandas.DataFrame	76
pandas.Series	74	pandas.Index	79
		Learning essential pandas. DataFrame operations	80

Indexing, selection, and filtering of DataFrames	80	Handling missing data in DataFrames	98
Dropping rows and columns from a DataFrame	82	The transformation of DataFrames with functions and mappings	101
Sorting values and ranking the values' order within a DataFrame	84	Discretization/bucketing of DataFrame values	102
Arithmetic operations on DataFrames	86	Permuting and sampling DataFrame values to generate new DataFrames	104
Merging and combining multiple DataFrames into a single DataFrame	88	Exploring file operations with pandas.DataFrames	106
Hierarchical indexing	91	CSV files	106
Grouping operations in DataFrames	94	JSON files	108
Transforming values in DataFrames' axis indices	97	Summary	109

5

Data Visualization Using Matplotlib

Technical requirements	112	Charting a pandas DataFrame with Matplotlib	124
Creating figures and subplots	112	Creating line plots of a DataFrame column	125
Defining figures' subplots	112	Creating bar plots of a DataFrame column	126
Plotting in subplots	113	Creating histogram and density plots of a DataFrame column	128
Enriching plots with colors, markers, and line styles	116	Creating scatter plots of two DataFrame columns	130
Enriching axes with ticks, labels, and legends	118	Plotting time series data	133
Enriching data points with annotations	120	Summary	144
Saving plots to files	123		

6

Statistical Estimation, Inference, and Prediction

Technical requirements	146	Augmented Dickey-Fuller test for stationarity of a time series	157
Introduction to statsmodels	146	Autocorrelation and partial autocorrelation of a time series	159
Normal distribution test with Q-Q plots	146	ARIMA time series model	161
Time series modeling with statsmodels	148		
ETS analysis of a time series	149		

Using a SARIMAX time series model with pmdarima	166	Generating the dataset	174
Time series forecasting with Facebook's Prophet library	171	Running RidgeCV regression on the dataset	178
Introduction to scikit-learn regression and classification	174	Running a classification method on the dataset	182
		Summary	186

Section 3: Algorithmic Trading in Python

7

Financial Market Data Access in Python

Exploring the yahoofinancials Python library	190	Access to the Federal Reserve Bank of St Louis' FRED	204
Single-ticker retrieval	191	Caching queries	205
Multiple-tickers retrieval	198	Exploring the Quandl data source	206
Exploring the pandas_datereader Python library	201	Exploring the IEX Cloud data source	207
Access to Yahoo Finance	202	Exploring the MarketStack data source	209
Access to EconDB	203	Summary	211

8

Introduction to Zipline and PyFolio

Introduction to Zipline and PyFolio	214	Importing data from the CSV files bundle	218
Installing Zipline and PyFolio	214	Importing data from custom bundles	219
Installing Zipline	214	Structuring Zipline/PyFolio backtesting modules	229
Installing PyFolio	215	Trading happens every day	230
Importing market data into a Zipline/PyFolio backtesting system	215	Trading happens on a custom schedule	231
Importing data from the historical Quandl bundle	215	Reviewing the key Zipline API reference	233

Types of orders	233	Introduction to risk management with PyFolio	236
Commission models	234	Market volatility, PnL variance, and PnL standard deviation	239
Slippage models	234	Trade-level Sharpe ratio	240
Running Zipline backtesting from the command line	235	Maximum drawdown	242
		Summary	244

9

Fundamental Algorithmic Trading Strategies

What is an algorithmic trading strategy?	246	Bollinger band strategy	292
Learning momentum-based/trend-following strategies	248	Pairs trading strategy	298
Rolling window mean strategy	248	Learning mathematical model-based strategies	305
Simple moving averages strategy	254	Minimization of the portfolio volatility strategy with monthly trading	305
Exponentially weighted moving averages strategy	259	Maximum Sharpe ratio strategy with monthly trading	312
RSI strategy	265	Learning time series prediction-based strategies	317
MACD crossover strategy	270	SARIMAX strategy	318
RSI and MACD strategies	276	Prophet strategy	323
Triple exponential average strategy	282	Summary	328
Williams R% strategy	287		
Learning mean-reversion strategies	292		

Appendix A

How to Setup a Python Environment

Technical requirements	329	Downloading the complimentary Quandl data bundle	332
Initial setup	329
